

Summary

If you only read this part - You should know I am determined. In my 5+ years as a Full stack Software Engineer, I have never given up on a problem and have always found a solution. I have experience across multiple fronts, Web, AI, Blockchain, Fintech - I have listed my relevant experience below, but even that I do not know now; I will learn and excel at it. I love building software and solving problems. I want to know more about your work and for you to know me. Let's connect.

Professional Experience

Full Stack Developer | [Unicef Office of Innovation\(OOI\)](#)

June 2024 - Present

- Explore and research frontier tech, mostly around AI and blockchain, for their use in UNICEF's cause and build real world prototypes to showcase value.
- Created a framework using micro frontend architecture to house all of OOI's prototypes for easy access and quick iterations. This framework reduced build-to-deploy time by 10x. It allowed the team to quickly move to the product stage from the MVP stage, streamlining the demonstration of innovations to stakeholders and partners,
- Developed multiple prototypes for use of blockchain especially in supply-chain and identity management.
- Developed AI prototypes for LLMs use in translation, accessibility, document processing and applications of AI agents.
- Collaborated with government agencies and startups to implement and scale technological innovations.
- Mentored 20+ startups on technical implementation, solving scalability challenges, and accelerating project timelines.
- Created an evaluation platform to compare LLM models across standard and popular metrics for translation purposes.

Senior Software Engineer | [Auxcube](#)

Jan 2022 - May 2024

- Joined with the founding members and was involved in setting up/ streamlining the processes.
- Optimized critical database operations with batching queries, reducing runtime by 5x for a major US healthcare application serving the top pharmacies plus increased savings by 10%.
- Developed a utility package consolidating common utilities across 10+ projects, significantly improving code reusability and maintenance.
- Architected/implemented a multi-tenant ERP application using MERN stack with an accounting module adhering to double-entry principles that was used by the company for reimbursements process.
- Developed multiple applications from the design phase to production with complex UI/UX design.
- Mentored junior developers and new hires, establishing development best practices and workflows
- Set up the Github and AWS CI/CD pipelines for my organization to use in all projects and for our internal architecture

Analyst Software Engineer | [Afiniti](#)

Mar 2021 - Dec 2021

- Enhanced monitoring React dashboard that evaluates/ensures client instances health with automated alerts, and intuitive UI, reducing system downtime by 70%
- Developed channel-agnostic Rasa Chatbot builder framework with 5+ popular social media channels supported.
- Increased test coverage (automatic and manual) on all codebases to up to 80%+ resulting in correction of critical bugs.
- Led product support within the first 2 months, receiving recognition from engineering leadership.

Skills / Technologies

Node JS, Javascript/Typescript, React JS, MongoDB, PostgreSQL, AWS/Azure, Git, Docker, HTML/CSS, Testing, AI/LLM

Frameworks

Next JS, Remix, Nest JS, Angular, Cypress, Selenium, Rasa

Education

Bachelors of Computer Science, COMSATS University Islamabad, Bronze Medalist

2017 - 2024

Notable Projects *(More projects on my GitHub profile)*

- **[Mock Progress](#)**: A type-safe npm package allows users to mock progress on the front end with 500+ downloads.
- **LLM Evaluation Tool (Internal)**: Compare LLM models using standard metrics with leaderboard and AI recommendation system based on user's use case.
- **ERP for Startups (internal)**: Multi-tenant ERP platform designed for quick onboarding for startups for daily operations.
